Turning Point: Audience Response System TM

How would you feel if you could in a pleasant and productive way:

- Increase the attention of your trainees,
- deliver and automatically score multiple choice tests and quizzes,
- initiate discussions during your teaching using objective and subjective questions,
- provide a non-competitive educational environment where everybody can participate,
- adapt your lecturing style to small and large groups of trainees.

TurningPoint

With Turning Point you can!

Turning Point gives you the ability to capture the attention of your trainees, to assess the level of their understanding during your training sessions and immediately score the multiple choice tests and quizzes you give to your trainees.

With Turning Point you can communicate with your audience through True/False, Multiple choice or Numerical questions which either you have prepared in advance in your power point presentation or you can ask "ad hoc".

Your audience can respond using the key pads. The answers can be anonymous if you wish. The results of the polling are presented in numerical and chart format such as pies and histograms. All the data involved are being stored and can be exported to excel for further analysis. You can play games, conduct examinations, assessments or surveys in real time.

By what the Turning Point educational environment is characterized?

- A one computer educational environment - the instructor's computer.
- All trainees are empowered with a simple durable response pad to communicate with the instructor's computer,
- A software interface supporting:
 - 1) Simple questioning capabilities for involving all trainees by verbalizing questions.
 - 2) Feedback mechanism for providing trainees with absolute knowledge that their answer has been received.
 - 3) Feedback mechanism denoting class results for each question.
 - 4) Absolute capture of individual trainee answers.
 - 5) Delivery and capture of trainee performance on traditional paper tests.

What's the difference between a non-TP and a TP training environment?

Turning Point training environments seems to cover the basics more quickly and thus had more time for broader discussions.

In previous (non-TP) classes, the instructor would give short lectures and then assign in-class exercises and practice quizzes.

Time would be spent walking around the classroom checking trainees progress and/or have other trainees provide feedback on each other's work.

This took more time than the Turning Point and provided much less reliable information on problem areas experienced by the trainees.

On the other hand, the Turning Point, with its objective question formats, emphasizes recognition of the "right" answer rather than working through the graphical analysis.

This points to the need to improve the question drafting process to use more graphically based questions.

With Turning Point system:

Involve everyone. Turning Point facilitates feedback from every trainee and allows each one to participate simultaneously.

Embarrass no one. Turning Point allows you to elicit a response from every trainee without embarrassing anyone for a wrong answer.

Reach a new generation. Bridge the generation gap with technology that is dynamic and relevant to today's young people.

Capture attention. Turning Point promotes an environment of steady provocation and interactive learning.

Captivate trainees for the entire class period with the Turning Point interactive pad technology. Use the technology in your educational environment one time and your trainees will ask for more!

Obtain feedback instantly. Whether you are using Turning Point for class interaction, class quizzes, or formal exams; Turning Point will generate percentage and graph totals of each question's answers.

Track student comprehension. With Turning Point performance data tracking tools, you will always know if your trainees are understanding the course material. Be in tune with your trainees' progress at all times.

Customize class reports. Turning Point will customize class performance results to fit your needs. View results by class, trainee, question, and/or learning objective in a variety of file types-Word, Excel, HTML, and PDF.
